Dark Queen / Sofía Arauz

Brand guidelines | approved enhanced logos with documented source limitations

Creative identity: Dark Queen

Professional identity: Sofía Arauz

Social identity: darkqueen.exe

Positioning: Game QA / 3D Environment Art

I test worlds and build them too.

Worlds with intention.

Edition 2.0 uses the four enhanced logos approved by the owner. Active PNG masters and resized exports are in 01-logos. Original artwork, exact opaque crops and previous logo exports remain in 06-source-reference.

The enhancements reconstruct edges and details; they are not exact source restorations. Owner-approved stroke treatments and edge coloration are retained. Color tokens and specified font names remain unchanged. True vector masters remain unresolved.

Logo system

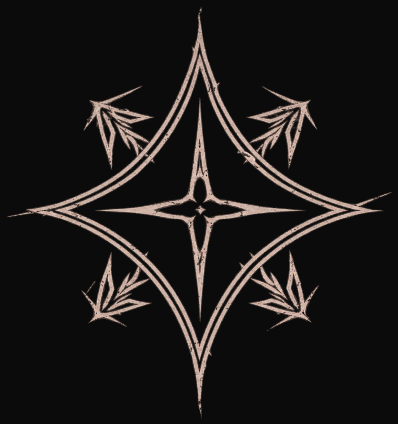

Keep original proportions, wording and relationships

Primary logotype

Symbol

Secondary emblem

DQ monogram

Use the primary logotype to introduce the brand. Use one main identity mark per placement. Keep the red signature subordinate. Leave generous clear space and keep surrounding text or ornaments outside the artwork.

Use the complete approved master and preserve its aspect ratio. Do not stretch, rearrange letters or substitute typed text for artwork. Dark fields support the intended appearance. Light-background comparisons are supplied for inspection.

No numeric clear-space unit or minimum size is defined by the source. Small-screen and physical production limits require review. SVG logo files embed PNGs; they are not editable vector paths.

Color palette

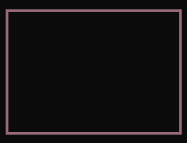

Exact JSON tokens | sRGB | HSL derived mathematically

Blood Red #8B1E24

rgb(139, 30, 36) | hsl(356.697 64.497% 33.137%)

Passion, creativity, emphasis and signature accents

Void #0B0B0B

rgb(11, 11, 11) | hsl(0 0% 4.314%)

Primary background, depth and focus

Charcoal #1F1F1F

rgb(31, 31, 31) | hsl(0 0% 12.157%)

Secondary dark neutral and visual balance

Stone #E8E4DE

rgb(232, 228, 222) | hsl(36 17.857% 89.02%)

Primary light contrast and logo/text color

Dusty Rose #9A6B7A

rgb(154, 107, 122) | hsl(340.851 18.876% 51.176%)

Muted personal accent

Moss #3A3E3A

rgb(58, 62, 58) | hsl(120 3.333% 23.529%)

Muted environmental and natural accent

Let Void and Charcoal dominate. Use Stone for primary light text and Blood Red for restrained emphasis. Dusty Rose and Moss are secondary accents. Keep text readable; accent colors mainly serve graphics.

Approved raster enhancements contain shaded, distressed and residual edge colors. They are not certified as exact palette-color artwork. The original six HEX tokens remain authoritative for layouts and solid backgrounds.

Typography & language

Exact specified names; rendered letterforms not independently verified

Uncial Antiqua

Primary wordmark and selected display headlines. Name explicitly specified. Actual rendered font, weight and style are unverified.

Use for short identity statements rather than body copy or dense technical information.

Inter

Body text, navigation, UI and technical content. Name explicitly specified. Actual rendered font, weight and style are unverified.

Use for project descriptions, blog articles, skills, contact information and QA documentation.

Reckless Neue

Optional editorial accent. Provisional font choice; exact family and style require confirmation.

Do not treat the font name as a verified handwritten typeface. Handwritten signatures and notes are separate graphic treatments.

Signature: preserve as a graphic. Its font identity is unknown. Reckless Neue is not a verified handwritten typeface. No font binaries are included, and no substitute family is assigned.

Use sentence case for interface copy. Pair expressive headlines with concrete work descriptions. Choose one main statement per application. Keep Sofía Arauz visible in introductions and professional materials.

Primary statement: I test worlds and build them too.

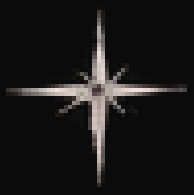

Short statement: Worlds with intention.

Positioning: Game QA and 3D Environment Art with a focus on detail, atmosphere and player experience.

This PDF uses Helvetica only for documentation. It is not an added brand font. Source mockup lettering must not override the exact wording in the supplied specification.

Elements & backgrounds

Only source-supported motifs and defined solid background colors

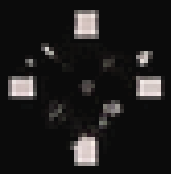

Exploration

Growth

Details

Use a small selection of motifs per application. Keep distressed linework away from body text and controls. Do not invent new icon proportions or claim that these low-resolution extractions are vector masters.

Void and Charcoal backgrounds are supplied as exact-color 1920 x 1080 and 1080 x 1080 PNGs and true vector SVGs. They are solid fields, not reconstructed textured surfaces.

The references show scratch marks, dark grain and thorn language. They do not provide a clean repeat tile or isolated texture master. Seamless patterns, photographs and merchandise artwork remain unresolved.

Supporting source signature is included without re-lettering. No alternate colorway, reversed logo or new composition is introduced.

Production & QA

Verified file properties; source limits remain visible

Folders: 01 logos; 02 elements; 03 backgrounds; 04 color and tokens; 05 guidelines; 06 source reference; 07 QA. README, JSON/CSV manifests and SHA-256 checksums accompany the package.

Approved enhanced masters use real alpha and retain their generated pixel dimensions. 256, 512 and 1024-pixel exports preserve each master aspect ratio within rounding. The seven supporting elements still use source-derived matte estimates. Original crops and prior logo exports remain available.

Logo SVGs are self-contained raster containers. Backgrounds and palette swatches are true vector shapes. No external image or font requests are needed to view the SVGs.

QA checks approval-master byte identity, alpha, dimensions, token colors, font labels, file decoding, SVG rendering and archive integrity. Approved reconstruction differences and known edge coloration are documented in 07-qa.

Before large-format printing, embroidery or precise vector production, obtain original artwork and font/style confirmation. Never use an enlarged raster as evidence of recovered detail. Exact clear-space and minimum-size rules need an approved master.

The four generative logo enhancements were expressly approved by the owner. They remain raster reconstructions. No font substitution, new palette token, spacing metric or seamless pattern is introduced.
